```
def lbs_to_kg(pounds):
    return pounds * 0.45359237

weight_lbs = 130
weight_kg = lbs_to_kg(weight_lbs)

print(f"{weight_lbs} lbs is equal to {weight_kg:.2f} kg")
```

```
130 lbs is equal to 58.97 kg
```

```
def lbs_to_kg(pounds):
    return pounds * 0.45359237

weight_lbs = 25
weight_kg = lbs_to_kg(weight_lbs)

print(f"{weight_lbs} lbs is equal to {weight_kg:.2f} kg")
```

```
25 lbs is equal to 11.34 kg
```

```
def lbs_to_kg(pounds):
    return pounds * 0.45359237

weight_lbs = 200
weight_kg = lbs_to_kg(weight_lbs)

print(f"{weight_lbs} lbs is equal to {weight_kg:.2f} kg")
```

```
200 lbs is equal to 90.72 kg
```

Above showing function converting pounds to kilograms of three different weights, 25 lbs, 200 lbs, and including my personal weight (130 lbs).
